## EDUCATION

|                                                                                                                       |                                                |
|-----------------------------------------------------------------------------------------------------------------------|------------------------------------------------|
| <b>National Institute of Technology, Jamshedpur</b><br><i>B.Tech in Computer Science and Engineering — CGPA: 7.04</i> | 2023 – Present<br><i>Jamshedpur, Jharkhand</i> |
| <b>Pinegrove Junior College</b><br><i>Senior Secondary, Telangana Board — 96.4%</i>                                   | 2021 – 2023<br><i>Telangana</i>                |
| <b>Greenwood High School</b><br><i>Secondary, CBSE — 87%</i>                                                          | 2020 – 2021<br><i>Telangana</i>                |

## TECHNICAL SKILLS

**Languages:** Python (*proficient*), C++ (*proficient*), JavaScript (*proficient*), C (*prior experience*), Java (*prior experience*)  
**Web & Backend:** React.js, Node.js, Express.js, FastAPI, REST APIs, Tailwind CSS, HTML/CSS  
**Databases & Cloud:** MySQL, PostgreSQL, MongoDB, Supabase, AWS, Docker  
**AI / ML:** GPT-4o-mini, Groq LLM, Sentence Transformers, NumPy, Pandas  
**Tools:** Git, GitHub, n8n, VS Code, Jupyter Notebook

## PROJECTS

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |                    |

| <b>Automated Recruitment Agent</b>   <i>Python, FastAPI, React, PostgreSQL, n8n, GPT-4o</i>  <br><i>GitHub</i>   <i>Team Project</i>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | Sep 2025 – Present |
| <ul style="list-style-type: none"><li>Engineered an AI resume parser using PyMuPDF, GPT-4o extraction, and Sentence Transformers (384-dim embeddings) achieving <b>90%+ matching accuracy</b> and automated shortlisting at a 35% similarity threshold, eliminating manual screening effort.</li><li>Built a React/FastAPI dashboard with 15+ endpoints supporting bulk resume uploads (50+ files), candidate ranking, and interview management, reducing recruiter workload by <b>85%</b> end-to-end.</li><li>Automated interview scheduling and onboarding via Google Calendar and Brevo APIs integrated into n8n workflows, cutting scheduling time from hours to under <b>5 minutes per batch</b>.</li><li>Designed a normalized PostgreSQL schema (8 tables) with Docker Compose orchestration, achieving <b>sub-50ms query response times</b> under concurrent load.</li></ul>                                                                                                        |                    |
| <b>Kryonex — Crypto Trading Simulation Platform</b>   <i>React, Node.js, MongoDB, Groq AI (LLM)</i>   <i>GitHub</i>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | Jan 2026 – Present |
| <ul style="list-style-type: none"><li>Built a full-stack crypto trading simulation platform with a <b>real-time WebSocket gateway</b> bridging Binance's public API to the client, delivering sub-second live price feeds across 15+ assets for concurrent users.</li><li>Integrated a Groq LLM (Llama-3.3-70b) as an in-app AI analyst that performs structured coin risk assessments — parsing price action, macro signals, and news — outputting a quantified verdict (<i>risk level, confidence score, buy/no-buy</i>) for each asset.</li><li>Engineered a squarified treemap heatmap using D3 Hierarchy with market-cap-weighted sizing and real-time 24h performance colouring, enabling portfolio-wide sentiment scanning at a glance.</li><li>Designed a Redis + in-memory two-tier caching layer for API responses, reducing redundant Binance calls and supporting a strategy builder (rule-based SMA/EMA signals) with multi-timeframe candlestick charts (1m to 1Y).</li></ul> |                    |

## ACHIEVEMENTS

**JEE Mains 2023:** Secured **94.92 percentile** (AIR 459) among 1.2 million candidates.  
**Competitive Programming:** Solved **200+ DSA problems** across LeetCode and GFG; strong in arrays, graphs, and trees — view full profile on Codolio.
